

Super heavy duty, Stainless Steel wash trays are made from 16 ga., perforated sheet. They are welded, corner braced, and hemmed for operator safety. A unique fine mesh Stainless Steel drape lid is utilized to minimize PCA movement during washing. The lid is retractable and is provided with a convenient locking lift handle mounted to a lid stiffener. Trays can be custom fabricated to any size and depth.

Often a dedicated or adjustable pallet is a solution of choice for high reliability, high value circuits or any PCA that should be suspended above/below any conveyor contact.
