

Pallets used in conformal coating provide clearance for over hanging components, masking of board or component areas, and are cleared to direct overspray downward to the machine filter system and not on your expensive conveyor system. Pallet materials are resistant to coating solvents for easy cleaning in a dip pan. Conformal coating pallets are a cost reduction method for machine down time due to cleaning and elimination or reduction in manual masking operations.

An adjustable version of a coating fixture is available for your Hi-mix / Lo-run projects.
